METER MIX DISPENSE

Table top two-component metering mixing and dispensing unit.
Preset variable ratio between the two components makes it easy to adapt to different types of resin.
Single screw holded two-component dosing group for an-easy ratio change.
Final mixing with disposable plastic static mixer. Output valve with baionet or bell-shaped static mixer adapter.
Foot-pedal controlled air operation.
Two translucent plastic tanks with 600 cc. capacity each for resin and hardener or, alternatively, two 9 lt. pressurized containers for high consumption rates.
Mechanical limit stop to control the output. Metering system with plunging pistons. Single acting output.
High dispensing precision with viscosities from water-thin up to 500.000 mPas.

TECHNICAL SPECIFICATIONS

• Mixing ratio:	from 100:100 to 100:5
• Max viscosity:	500.000 mPas.
• Min dosed amount:	0,025 cc.
• Max dosed amount:	12 cc.
• Max N. of cycles per min.:	45
• Operating Pressure:	5,5 – 9 bar
• Weight:	6 Kg.
